# Organic production in France

Fédération Nationale d'Agriculture Biologique des régions de France

- Organic market growth of +20% in 2016
  - Organic market: 6,9 billion € by the end of 2016 (forecast)
  - Each day: 21 new organic farm
  - More than 1,5 million ha as organic
  - **More than 10% organic wine growth sales**
- (Source : Agence Bio)

**=> Flourishing organic production and market**

# Legal framework

## Current situation and possible future legislation

• FNAB •

Fédération Nationale  
d'Agriculture **BIOLOGIQUE**

# Current legal framework

Fédération Nationale d'Agriculture Biologique des régions de France

- Annex II of EU organic Regulation (889/2009):  
**6kg/ha/year** or **30kg/ha in 5 years** with the smoothing mechanism.
- Quantity allowed until **2018** (expiry of marketing authorisation)
- Smoothing mechanism:
  - Farmers are decision makers: adaptation to the annual climate condition.
  - Tool to lower the use of copper (security reserve).

• FNAB •

Fédération Nationale  
d'Agriculture BIOLOGIQUE

# Potential evolution of the legislation

Fédération Nationale d'Agriculture Biologique des régions de France

- **Peer review conclusion (2008 and 2013):** 4,5kg/ha/year, no smoothing mechanism
- **French Agency** dealing with sanitary safety in food and the environment (2008), conclusion : 4kg/ha/year, no smoothing mechanism
- **French Agriculture Ministry (DGAL)**, as the “rapporteur” for Europe for copper products, conclusion 2015 : keep 6kg and smoothing mechanism (now evaluation skills transferred to ANSES)
- **But new copper products in 2016** : marketing authorization at 4kg/ha/year

**=> What about the situation and needs of organic farmers on the ground?**

• FNAB •

Fédération Nationale  
d'Agriculture BIOLOGIQUE

# Legal evolution based on questionable studies

Fédération Nationale d'Agriculture Biologique des régions de France

- Organic farmers need to have a **clear vision** of the legal framework after 2018.
- **Problem** with the current **state of the art** on evaluation of copper (studies EFSA and ANSES):
  - Studies carried out **in vitro, not in vivo** = No real production conditions! => **Need for IN VIVO studies**
  - Studies carried out at 4, 8 or 12kg/ha/year: **Why not at the legal limitation of 6 kg/ha/year?** => **Need for studies at 6kg**
  - Studies carried out without the **smoothing mechanism**: testing 4 years at the same level of copper doesn't reflect the reality!  
=> **Need for studies with smoothing mechanism**

# On the ground situation for organic farmers

1/ Vinetage 2016

2/ Study from 2008 to 2012

• FNAB •

Fédération Nationale  
d'Agriculture BIOLOGIQUE

# Vintage 2016

Fédération Nationale d'Agriculture Biologique des régions de France

- Bad climatic conditions: late frost, rainy spring season, hail
- Mildew pressure : on foliage and grapes
- Decrease of the yields
- Threat to the wine stocks, and sometimes to the whole wine yard
- Organic farms are going back to conventionnal production (250ha in Burgundy)

**=> Copper is currently the only solution in organic farming. No alternative available.**

# The situation keeps repeating itself

Fédération Nationale d'Agriculture Biologique des régions de France

## Conclusion:

- Strong **mildew pressure: Northern** (Champagne, Burgundy) and **Atlantic** (Bordeaux, Loire) regions.
- Annual copper use: from 2kg/ha to 6,5kg/ha
- > **Need to keep the smoothing mechanism**
- Impossible to stick to 4kg/ha/year (bad climatic conditions and no alternative available)
- > **Need for natural alternatives**

# What organic farmers need is...

• FNAB •

Fédération Nationale  
d'Agriculture **BIOLOGIQUE**

## What organic farmers need is...

Fédération Nationale d'Agriculture Biologique des régions de France

- **RESEARCH on natural alternatives** to reduce copper use while protecting the wine, fruits and vegetable productions.
- Meanwhile: Keep the only effective dosis: **6kg/ha/year with the smooting mechanism** (30kg/ha/5 years).
- Debate on ecological impact of organic farming: **copper reduction vs. synthetic chemical products?**
